What is the project?

We are offering an E-Commerce website that can get you a step closer to this goal and today we want to share with you why it's important for businesses to have an E-Commerce website in place to better serve their customers.

Why did we choose this topic?

We choose this project because more people are moving to a more “digital approach” for their shopping (and trends show more and more people are using online shopping), businesses need to be able to meet this demand and new phenomenon.

What is our goal of making this project?

Our Goal:

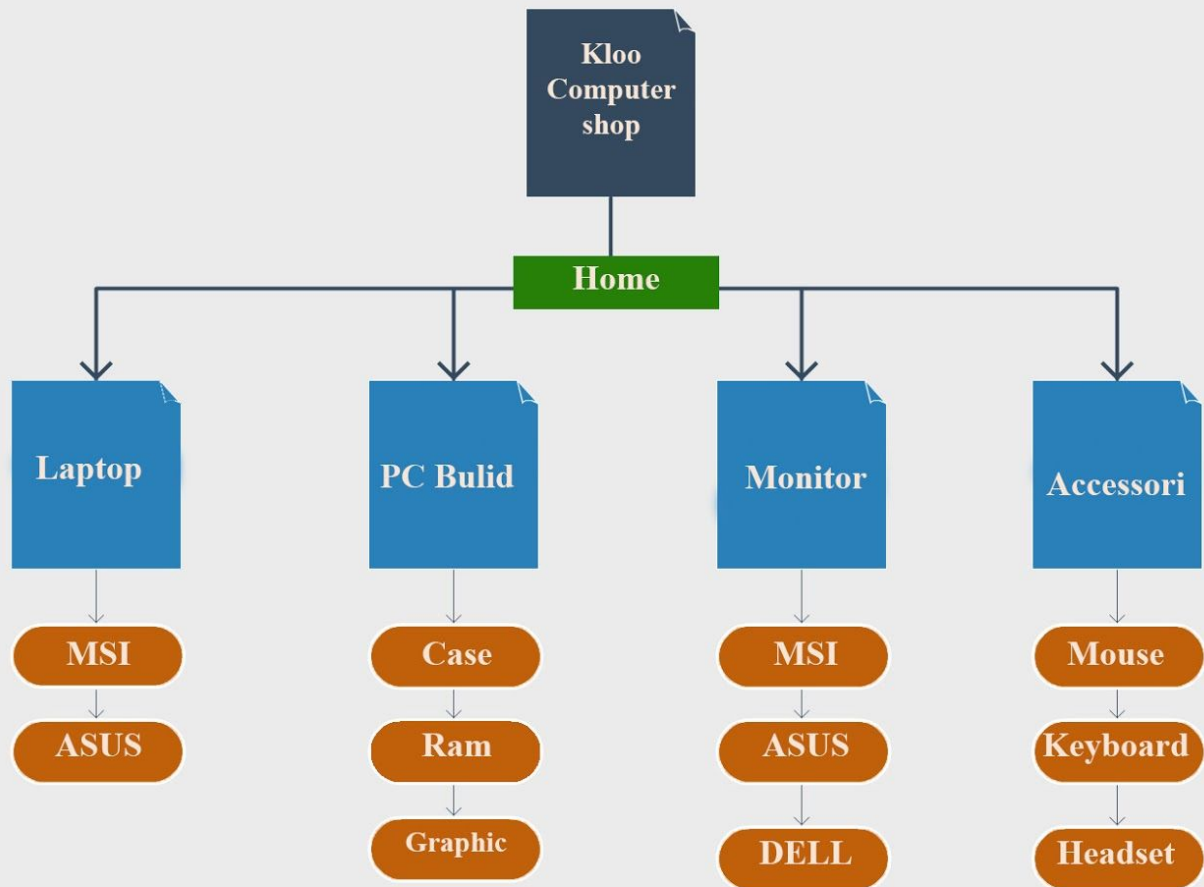

This website will provide users the best experiences by tracking the products that are valued in such systems; these presumably include best quality of product, accurate place to the map, fast response time, flexibility, and, above all, saving times. First of all, It gives you control over the shop(retailer) and your customer order history. Secondly, We'll focus on maximizing our e-commerce features to help drive your company revenue and improve your customer experience. Thirdly, We'll include a powerful search and categorization so customers can easily and quickly find what they're looking for. Therefore, our ultimate goal is to make shopping more convenient.

How does my team build this platform?

Basically this project, we built it from scratch since We are all still new to web material.

First, we start with front-end which are HTML + CSS + JAVASCRIPT. Second, we started to see similar websites which have almost the content and beautiful layout so we followed their style of their web. Third, we also got support from W3school web and especially plenty of methods and tools from our instructor.

Here is our site map:
